

▶ Roundspan

▶ Tennis

Width	17,5 m								
Side height	5 m								

The Roundspan has been a part of the Veldeman line for sport halls for many years. This hall is also ideal for covering tennis courts. Thanks to a sliding curtain system, you can play tennis all year round.

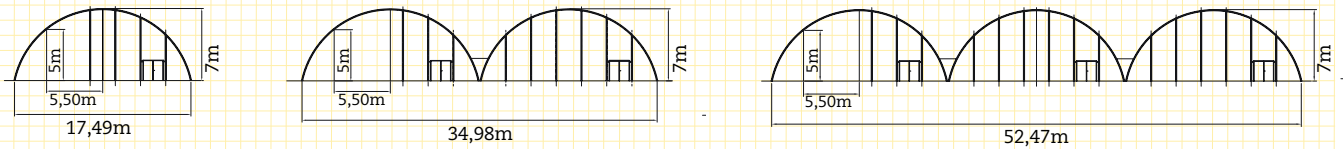

If a cover is needed for multiple courts, these halls are linked together with a free passageway between both structures. Sustainable materials, very short assembly time, combined with an economical price mean that the winter stoppage for many clubs will be a thing of the past thanks to this cylinder hall.

In addition, you can complement the hall as you wish and for your own use amongst others with **doors**, **curtains**, **inner liner**, **ventilation openings**, **guttering and separating nets**, **lighting**, **heating**.

Ground plan

Construction

The cylindrical hall is made from 17 galvanised supporting steel arches in compliance with BN 657, with intervening spaces of 2.23 m, or 16 sections. The standard anchoring is realised with chemical anchors. If the terrain allows it, the hall can be directly mounted on an existing terrain without any foundations.

Technical Specifications	
Standard width	17,5 m
Standard length	Unlimited
Side height	5,007 m
Ridge height	7 m – 9 m
Bay Distance	2,23 m

Roof and gable fabrics

Roof and gable fabrics are made from white translucent PVC coated fabric. This fabric is stretched vertically over tension bars and threaded rods. Flame retardant according to the French standard M2, German standard DIN 4102 B1 and British Standard BS 5438. The fabric is UV-stabilised and treated against deterioration due to rot and mildew.

Colour of the hall

- the facades + 1st and last section: green
- roof fabric: white with green edge up to 4 m
